

EQUIPMENT FOR THE REDEVELOPPED MOTHER-CHILD PROGRAM

\$1 MILLION

Mother and children will benefit from care centred
on their life and health histories.

Chaleur Regional Hospital will reorganize the Mother-Child Program, uniting obstetrical, gynaecological and pediatric care on one floor in the new building. This will provide an environment conducive to implementing new initiatives that presently are not possible due to the limitations within the existing infrastructure. The Mother-Child Program will evolve and maintain its high quality care. Each year, over 500 babies are born in this hospital.

“When you spend a long time in the hospital following delivery, you need the best possible conditions to get through it. I found that the mother was getting a lot of good care but there was not enough room for the father. Reorganizing the Mother/Child Program at the Chaleur Regional Hospital will help to better accommodate both parents, whether it be in more spacious rooms or family rooms.”

JESSICA POIRIER, MOTHER

EXCELLENCE, A HEALTHY INVESTMENT IN OUR CHILDREN AND THEIR PARENTS!
