

PROJECT **2**

EQUIPMENT FOR THE NEW PATIENT ROOM

\$1,25 MILLION

Single-patient rooms will enable equipment and care to be adapted to the evolving needs of patients.

To create an environment centred on privacy, comfort, dignity and infection prevention, the out-of-date 3 and 4 patient rooms will be replaced with 85% private and 15% semi-private rooms, each with a private toilet and shower. This update will allow the hospital to conform to the latest trends and standards advocated by specialists the world over. All of the rooms will be equipped with adjustable beds and state-of-the-art equipment. There is consensus on the numerous beneficial effects of such comfortable and advanced technology rooms.

“During my many hospital stays, I have been the fifth patient in a room of four people on a few occasions, for a period of two to three days. You can imagine how difficult this situation was, whether it be for doctors, nurses, other patients, visitors, families, or myself. The staff were very professional and the care excellent, but these conditions were not easy for anyone.”
